

Pantry and Household inventory application

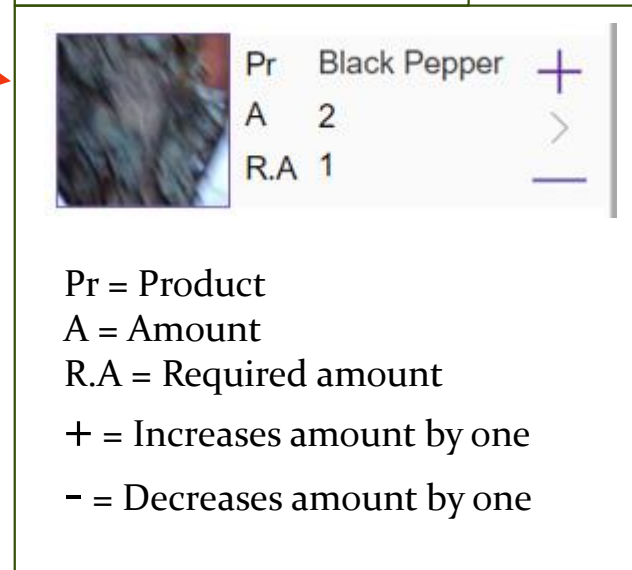

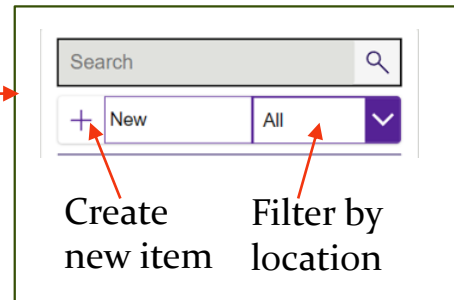

User interface instructions

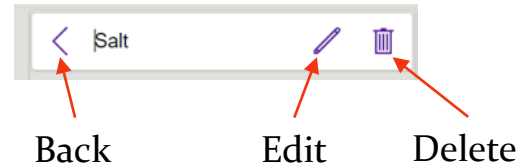

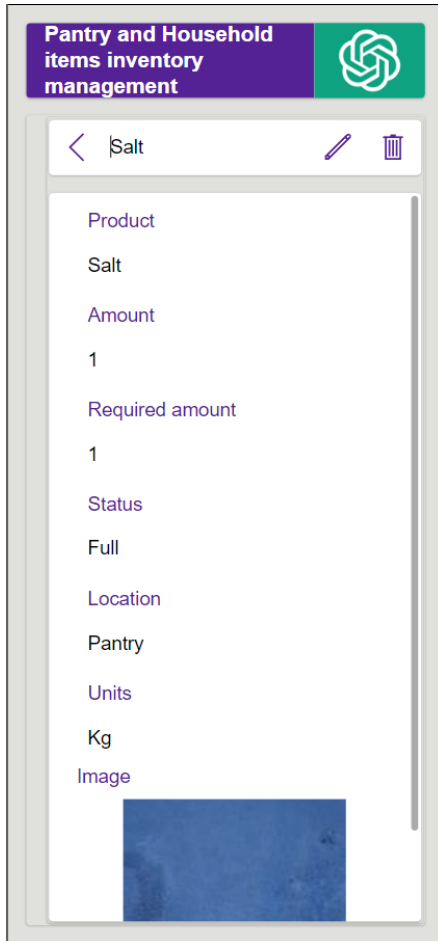

Frontpage

Navigate to ChatGPT screen

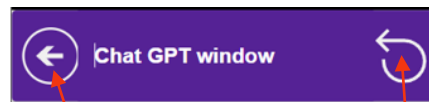

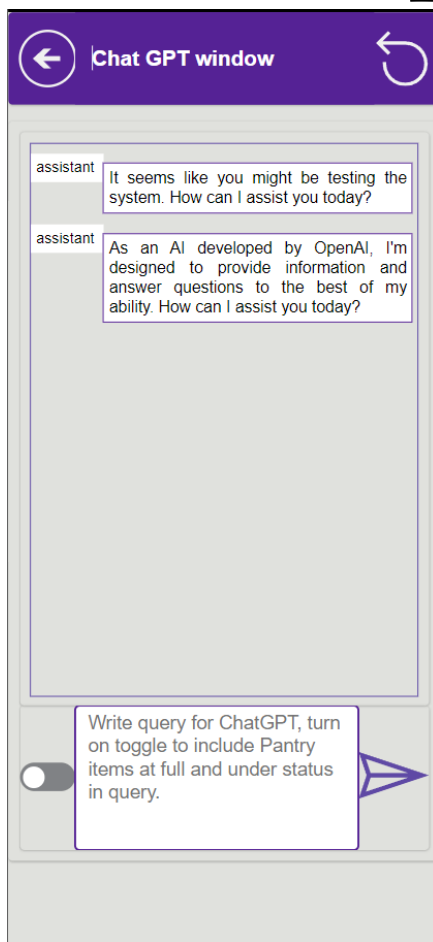

Product View, edit and new item views

- New item view is same with all details empty except Status which will be automatically changed according to formula
- Edit page view is same, but user can change details of the existing product within it.
- Status is only field that will be automatically changed depending on relation between Amount and Required amount
- Tapping image on phone or tablet opens a popup asking user to either take photo, select photo from gallery or upload a image file.
